Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 recites the limitation "said one or more control elements" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim 8 recites the limitation "said one or more control elements" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 38 is rejected under 35 U.S.C. 102(e) as being anticipated by Japikse (6,699,008).

Art Unit: 3745

In figure 1, and column 7, lines 12-31, Japikse teaches a method of controlling secondary fluid flow within a flow channel 103, said method comprising the steps of: a) providing a device 104 for causing a two-phase fluid in the secondary fluid flow to collapse or condense into a substantially single-phase fluid; b) providing a passage 108 that allows the secondary fluid flow to flow to a point upstream in the flow channel 103 and c) directing the secondary fluid flow 110 to either said device in step a) or device in step b).

Allowable Subject Matter

Claims 1-5, 7, 9-37 are allowed.

Claims 6 and 8 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Prior Art

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consist of three patents.

Meng (4,708,584) is cited to show a fluid re-entry device having a diffuser passage, a re-entry passage but fails to teach a by-pass passage.

Fisher et al. (4,743,161) is cited to show a fluid re-entry device having a diffuser passage, a re-entry passage but fails to teach a by-pass passage.

Art Unit: 3745

Rohne (4,990,053) is cited to show a fluid re-entry device having a diffuser passage, a re-entry passage but fails to teach a by-pass passage.
